

ELECTRONIC JOURNAL OF APPLIED STATISTICAL ANALYSIS

Open Call for Papers for the Special Issue on STATISTICS IN SPORTS

A Special Issue of EJASA (open access journal indexed in SCOPUS and Thomson Reuters Web of Science™ Core Collection - Emerging Sources Citation Index) is devoted to Statistics in Sports.

In the last decades the idea of a statistical thinking in sports has gained a rapidly growing interest, as documented by the wide scientific production on this theme and also by the publication of some insightful collections of statistical analyses applied to data from a wide range of sports, including American football, baseball, basketball, ice hockey and many others.

This special issue is aimed at collecting qualified research papers that propose developments of new statistical methods of sport analytics and/or give new insights into sports through any type of statistical technique (exploratory statistics, data mining, machine learning, statistical models for prediction, visualization, big and open data,...). Papers about any sport are welcome, including non professional sports.

The papers' length must be 10-14 pages and follow the Editorial Standard of EJASA.

The deadline for the submission is November 15, 2016. All the submitted manuscripts will go through a two-round peer-review process, and the Special Issue will be published by 2017.

Guest Editors

Paola Zuccolotto, University of Brescia

Marica Manisera, University of Brescia

Ron Kenett, KPA Group and University of Torino
