## Workshop on

The workshop aims at bringing together researchers interested in the analysis of the space-time processes for improving the seismic hazard assessment in probabilistic terms. The invited speakers will show the results of their research activities inside the project “Complex space-time modeling and functional analysis for probabilistic forecast of seismic events”, funded by the Italian Ministry of University, Education and Research, for the PRIN-2015 program.

### Workshop program:

**10:50 - Opening:** Space-time modeling and new hints for probabilistic forecast of seismic events - *Giada Adelfio (University of Palermo)*

**11:00** - Classification of spatio-temporal point pattern in the presence of clutter - *Marianna Siino (University of Palermo)*

**11:20** - Using covariates in space-time ETAS model - *Marcello Chiodi (University of Palermo)*

**11:40 - Coffe break**

**12:00** - Evaluation of the performance of the national seismic network and earthquakes locations - *Salvatore Scudero, Antonino D’Alessandro (INGV)*

**12:20** - Failure models driven by a self-correcting point process in earthquake occurrence modeling - *Renata Rotondi (CNR-IMATI, Milan)*

**12:40** - Comparison of two clustering algorithms through centrality measures for the characterization of earthquake clusters - *Elisa Varini (CNR-IMATI, Milan)*

**13:00** - Clustering of spatio-temporal point processes using local spatial-temporal dependence models - *Antonio Balzanella (University of Campania Luigi Vanvitelli)*

**13:20 - DISCUSSION**

*Location: Department of Mathematics and Physics of University of Campania “Luigi Vanvitelli”, Viale Lincoln 5, Caserta, Italy.*
